

For setting it up you need to create a cloudformation stack for it, and for creating a cloudformation stack you need a json or a yaml file.

You can get the json file from repository mentioned below:-

<https://bitbucket.org/team99array/infra-automation/src/master/apigateway.json>

For creating the stack you need to upload the json file in cloudformation, for performing this follow the below steps:-

- 1) Go to aws console and select cloudformation from service
- 2) Click on create stack
- 3) In specify template option, select upload a template file
- 4) Now choose the template file that you have cloned from the repository above
- 5) Click on next and provide the name for your stack and again click on next and next and scroll down to bottom and select the checkbox to allow permissions
- 6) Click next and wait for the process to be in steady state.
